A Critical Impulse to e-Governance in the Asia Pacific Apr 14 2021 This book presents a comparative study of the vision, ability and dynamism on the part of governments in selected Asian Pacific countries as they engage in the distribution of e-governance. Consequently, it creates a platform for mutual learning and offers a dispassionate evaluation of mega e-projects. It is an interdisciplinary study of information and communication technology within mainstream social science research and attempts to bridge the gap in empirical research between the nature of technology and the manner in which it is governed. The analysis shows that hegemonic and panoptic structures of surveillance and control may derail efforts to establish sustainable e-governance, while a liberal futuristic framework with open socio-technology networks on Big Data analytics, IPv6 and Cloud Computing may strengthen the trend towards democratizing institutions. Further, the book highlights the extraordinary energy being generated in the emerging new world through their use of the internet and suggests how governments could translate this into a new wealth of economic opportunities, social inclusion and equitable development, in addition to achieving the MDGs (Millennium Development Goals). Lastly, it emphasizes the importance of a visionary approach, which, wherever present, has been able to sustain e-governance by meaningfully linking the micro to the macro and heritage to the horizon.

Information Systems Oct 21 2021 This unique new textbook on Information Systems (IS) provides an answer to a few basic questions in the field: What is the scientific nature of IS? How do we design IS in today's connected world? What is the relationship between IS and innovation in knowledge economies? Whereas mainframe corporate computers tended to dominate the thinking in the 1980s, the dominating factor today is personal digital devices that connect the world as one whole IS. Network science is emerging to describe these digital connections (e.g., social networking), and service science is similarly emerging to describe service value networks. This book therefore synthesizes the emerging network science and service science with the classic IS theory, resulting in a new set of principles for IS strategic planning. It also reviews the standard IS topics of system analysis and database design, covering the whole spectrum of databases and all the major methods and techniques of database design. The role of IS as a technological innovation in the knowledge economy is also analyzed. In doing so, new concepts such as basic values of IS, systems of IS, sustainability of IS, IS as a service system, IS as a human value network, and the hyper-network model for innovation by IS, are developed.
