**Happiness and the Law** Nov 27 2019 Happiness and the law the two concepts seem to have little to do with one another. To some people, they may even seem diametrically opposed. Yet, one of the things that laws strive to do is improve the quality of people s lives. John Bronsteen and his coauthors draw on new research on happiness from psychology, economics, and neuroscience to understand the law s effects on peoplewhether they make them happy or unhappyand how good the law is at predicting these effects. Happiness research has shown that people can adapt to some things but not to others; that people

often err in predicting what will make them happy; and that money affects most people's happiness less than is assumed. Using such insights, the authors consider the effects of legal policies and regulations, criminal punishments, and civil lawsuits on how people experience their lives. The results are exciting and often counterintuitive. The findings of hedonic psychology indicate, for example, a need to rethink our current understandings of imprisonment and monetary fines. Most broadly, the book proposes a comprehensive approach to human welfare to assess the good and bad consequences of laws and policies. This approach, well-being analysis, is far superior to the strictly economically based cost-benefit analyses which currently dominate how we evaluate public policy. The study of happiness is the next step in the evolution from traditional economic analysis of the law to a behavioral approach.

"Happiness and the Law" will serve as the definitive, yet accessible, guide to understanding this new paradigm."

*Time and Decision* Jun 02 2020 How do people decide whether to sacrifice now for a future reward or to enjoy themselves in the present? Do the future gains of putting money in a pension fund outweigh going to Hawaii for New Year's Eve? Why does a person's self-discipline one day often give way to impulsive behavior the next? *Time and Decision* takes up these questions with a comprehensive collection of new research on intertemporal choice, examining how people face the problem of deciding over time. Economists approach intertemporal choice by means of a model in which people discount the value of future events at a constant rate. A vacation two years from now is worth less to most people than a vacation next week.

Psychologists, on the other hand, have focused on the cognitive and emotional underpinnings of intertemporal choice. *Time and Decision* draws from both disciplinary approaches to provide a

comprehensive picture of the various layers of choice involved. Shane Frederick, George Loewenstein, and Ted O'Donoghue introduce the volume with an overview of the research on time discounting and focus on how people actually discount the future compared to the standard economic model. Alex Kacelnik discusses the crucial role that the ability to delay gratification must have played in evolution. Walter Mischel and colleagues review classic research showing that four year olds who are able to delay gratification subsequently grow up to perform better in college than their counterparts who chose instant gratification. The book also delves into the neurobiology of patience, examining the brain structures involved in the ability to withstand an impulse. Turning to the issue of self-control, Klaus Wertenbroch examines the relationship between consumption and available resources, showing, for example, how a high credit limit can lead people to overspend. Ted O'Donoghue and Matthew Rabin show how people's awareness of their self-control problems affects their decision-making. The final section of the book examines intertemporal choice with regard to health, drug addiction, dieting, marketing, savings, and public policy. All of us make important decisions every day-many of which profoundly affect the quality of our lives. *Time and Decision* provides a fascinating look at the complex factors involved in how and why we make our choices, so many of them short-sighted, and helps us understand more precisely this crucial human frailty.

**Heuristics and Biases** Dec 21 2021 This book, first published in 2002, compiles psychologists' best attempts to answer important questions about intuitive judgment.

*The Wisdom in Feeling* Dec 09 2020 The fundamental concern of psychotherapy is change. While practitioners are constantly greeted with new strategies, techniques, programs, and

interventions, this book argues that the full benefits of the therapeutic process cannot be realized without fundamental revision of the concept of change itself. Applying cybernetic thought to family therapy, Bradford P. Keeney demonstrates that conventional epistemology, in which cause and effect have a linear relationship, does not sufficiently accommodate the reciprocal nature of causation in experience. Written in an unconventional style that includes stories, case examples, and imagined dialogues between an epistemologist and a skeptical therapist, the volume presents a philosophically grounded, ecological framework for contemporary clinical practice.

**The Guardian and the Dream Crawler** May 02 2020

**Unintended Thought** Apr 24 2022 Bringing together an array of outstanding contributors, this volume offers an in-depth examination of unintended thought--its underlying mechanisms, consequences in day-to-day life, and role in mental and emotional disturbance. Chapters describe a number of important phenomena that are influenced by unintended (and sometimes automatic, uncontrolled, or unconscious) ways of perceiving and interpreting the social and physical environment. These include inferences and judgments about self and others, stereotyping and prejudicial behavior, the impact of persuasive messages, long-term goals, responses to stress, and clinical depression. Key questions explored include the extent to which research findings in controlled settings bear on cognition and behavior outside the laboratory; how such constructs as intention and control of thought have been operationalized by investigators; and when self-control of unintended thought is possible or even desirable. Researchers, practitioners, and graduate students in cognitive, social, personality, and clinical psychology will find much of value in this unique work.

Iron River Sep 25 2019 2019 Paterson Prize winner Skipping

Stones Book Award Kirkus Reviews' Best YA Historical Fiction of 2018 A river runs through young Manny Maldonado Jr.'s life, heart and imagination. Sometimes at night it even shoots through his brain like a bullet. But this river isn't water, it's iron—the tracks and trains of the Southern Pacific railroad that pass along his tight-knit neighborhood in the San Gabriel valley just ten miles east of L.A. The iron river is everything to Man-on-Fire, Man for short to his friends, Little Man to his uncles and cousins. He watches it, he waits for it, he plays nears its tracks, he listens for the weight of its currents (strong currents flowing east pulling two hundred boxcars, light current going west with less than fifty cars), he whiles away long summer days throwing rocks and bricks at it with his friends Danny, Marco and Little. They line up cans and bottles in mock battles to try to throw it off track. But nothing derailed the iron river, and nothing stops the stinking cop Turk from trying to pin a hobo's murder on the four young boys.

*Nudge* Jan 28 2020 Thaler and Sunstein offer a groundbreaking discussion of how to apply the science of choice to nudge people toward decisions that can improve their lives without restricting their freedom of choice.

*The Last American Man* Feb 08 2021 At the age of seventeen, Eustace Conway ditched the comforts of his suburban existence to escape to the wild. Away from the crushing disapproval of his father, he lived alone in a teepee in the mountains. Everything he needed he built, grew or killed. He made his clothes from deer he killed and skinned before using their sinew as sewing thread. But he didn't stop there. In the years that followed, he stopped at nothing in pursuit of bigger, bolder challenges. He travelled the Mississippi in a handmade wooden canoe; he walked the two-thousand-mile Appalachian Trail; he hiked across the German Alps in trainers; he scaled cliffs in New Zealand. One

Christmas, he finished dinner with his family and promptly upped and left - to ride his horse across America. From South Carolina to the Pacific, with his little brother in tow, they dodged cars on the highways, ate road kill and slept on the hard ground. Now, more than twenty years on, Eustace is still in the mountains, residing in a thousand-acre forest where he teaches survival skills and attempts to instil in people a deeper appreciation of nature. But over time he has had to reconcile his ambitious dreams with the sobering realities of modernity. Told with Elizabeth Gilbert's trademark wit and spirit, this is a fascinating, intimate portrait of an endlessly complicated man: a visionary, a narcissist, a brilliant but flawed modern hero. *The Last American Man* is an unforgettable adventure story of an irrepressible life lived to the extreme. *The Last American Man* is a New York Times Notable Book and National Book Critics Circle Award Finalist.

*Envy Up, Scorn Down* Dec 29 2019 An insightful examination of why we compare ourselves to those above and below us. The United States was founded on the principle of equal opportunity for all, and this ethos continues to inform the nation's collective identity. In reality, however, absolute equality is elusive. The gap between rich and poor has widened in recent decades, and the United States has the highest level of economic inequality of any developed country. Social class and other differences in status reverberate throughout American life, and prejudice based on another's perceived status persists among individuals and groups. In *Envy Up, Scorn Down*, noted social psychologist Susan Fiske examines the psychological underpinnings of interpersonal and intergroup comparisons, exploring why we compare ourselves to those both above and below us and analyzing the social consequences of such comparisons in day-to-day life. What motivates individuals, groups, and cultures to envy the status of some and scorn the status of others? Who experiences envy and scorn most? *Envy Up, Scorn Down* marshals a wealth of recent psychological studies as well as findings based on years of Fiske's own research to address such

questions. She shows that both envy and scorn have distinctive biological, emotional, cognitive, and behavioral characteristics. And though we are all “wired” for comparison, some individuals are more vulnerable to these motives than others. Dominant personalities, for example, express envy toward high-status groups such as the wealthy and well-educated, and insecurity can lead others to scorn those perceived to have lower status, such as women, minorities, or the disabled. Fiske shows that one’s race or ethnicity, gender, and education all correlate with perceived status. Regardless of whether one is accorded higher or lower status, however, all groups rank their members, and all societies rank the various groups within them. We rate each group as either friend or foe, able or unable, and accordingly assign them the traits of warmth or competence. The majority of groups in the United States are ranked either warm or competent but not both, with extreme exceptions: the homeless or the very poor are considered neither warm nor competent. Societies across the globe view older people as warm but incompetent. Conversely, the very rich are generally considered cold but highly competent. *Envy Up, Scorn Down* explores the nuances of status hierarchies and their consequences and shows that such prejudice in its most virulent form dehumanizes and can lead to devastating outcomes—from the scornful neglect of the homeless to the envious anger historically directed at Tutsis in Rwanda or Jews in Europe. Individuals, groups, and even cultures will always make comparisons between and among themselves. *Envy Up, Scorn Down* is an accessible and insightful examination of drives we all share and the prejudice that can accompany comparison. The book deftly shows that understanding envy and scorn—and seeking to mitigate their effects—can prove invaluable to our lives, our relationships, and our society.

*Paradise Redefined* Oct 07 2020 This book picks up where author Vanessa Fong left off in *Only Hope: Coming of Age under China's One-Child Policy* (Stanford, 2004), and continues by telling the stories of the Chinese youth who left China in their teens and 20s to study in Australia, Europe, Japan, New Zealand, North America, or Singapore. Fong examines the expectations and experiences of Chinese students who go abroad in search of opportunity, and the factors that cause some to

return to China and others to stay abroad.

Social Comparison Mar 24 2022 During the past decade, social comparison processes have been the focus of considerable research and theorizing in social psychology. This volume, consisting of a series of original chapters by leading professionals in the field, presents the most advanced thinking and research on this topic. Contributors describe how the original social comparison theory -- formulated by Leon Festinger in the early 1950s -- has been modified as a result of new insights from attribution, social cognition, and self theories. A valuable source of state-of-the art information, it also discusses how comparison processes have increased understanding in applied areas, such as the study of stigmatized groups, minorities, and physically ill individuals.

**Introducing Psychology** Jun 26 2022 This is the textbook only without Launchpad. With an author team equally at home in the classroom, in the lab, or on the bestseller list, this book is written to keep students turning the pages. It offers expert coverage of psychology's scientific foundations, but communicates with students in a style that's anything but that of a typical textbook. *Introducing Psychology* keeps the level of engagement high, with quirky and unforgettable examples, and reminders throughout that the critical thinking skills required to study psychology will serve students well throughout their lives. The fourth edition has been completely retooled for the classroom. For the first time, each chapter section begins with Learning Outcomes to guide students' learning. These outcomes represent the big picture, so readers come away with more than a collection of facts. The new edition also includes the new 'A World of Difference' feature, which highlights interesting and important research on individual differences such as sex, gender, culture and ethnicity in understanding the breadth of

psychology. Introducing Psychology can also be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. LaunchPad's intuitive interface presents quizzing, flashcards, animations and much more to make learning actively engaging.

**Duped** Aug 24 2019 A scrupulous account that overturns many commonplace notions about how we can best detect lies and falsehoods From the advent of fake news to climate-science denial and Bernie Madoff's appeal to investors, people can be astonishingly gullible. Some people appear authentic and sincere even when the facts discredit them, and many people fall victim to conspiracy theories and economic scams that should be dismissed as obviously ludicrous. This happens because of a near-universal human tendency to operate within a mindset that can be characterized as a "truth-default." We uncritically accept most of the messages we receive as "honest." We all are

perceptually blind to deception. We are hardwired to be duped. The question is, can anything be done to militate against our vulnerability to deception without further eroding the trust in people and social institutions that we so desperately need in civil society? Timothy R. Levine's *Duped: Truth-Default Theory and the Social Science of Lying and Deception* recounts a decades-long program of empirical research that culminates in a new theory of deception--truth-default theory. This theory holds that the content of incoming communication is typically and uncritically accepted as true, and most of the time, this is good. Truth-default allows humans to function socially. Further, because most deception is enacted by a few prolific liars, the so called "truth-bias" is not really a bias after all. Passive belief makes us right most of the time, but the catch is that it also makes us vulnerable to occasional deceit. Levine's research on lie detection and truth-bias has produced many provocative new findings over the years. He has uncovered what makes some people more believable than others and has discovered several ways to improve lie-detection accuracy. In *Duped*, Levine details where these ideas came from, how they were tested, and how the findings combine to produce a coherent new understanding of human deception and deception detection.

**Wilful Blindness** Nov 07 2020 Fully revised and updated since its first publication in 2011 to encompass further appalling instances of wilful blindness: Grenfell Tower, Carillion, Harvey Weinstein, Windrush and many more 'Entertaining and compellingly argued' Sunday Times 'A tour de force of brilliant insights' Philip Zimbardo 'A polemic against the dangers of docility and "groupthink" in every walk of life' Books of the Year, Financial Times 'Writing in clear, flowing prose, Heffernan draws on psychological and neurological studies and interviews with executives, whistleblowers and white-collar criminals' New York Times 'An engaging read, packed with cautionary tales ... Heffernan shows why we close our eyes to facts that threaten our families, our livelihood, and our self-image – and, even better, she points the way out of the darkness' Daniel H. Pink, author of Drive and A Whole New Mind? Why, after every major accident and blunder, do we look back and ask, how could we have been so blind? Why do some people see what others don't? And how can we change? Drawing on studies by psychologists and neuroscientists, and from interviews with business leaders, whistle blowers and white collar criminals, distinguished businesswoman and writer Margaret Heffernan examines the phenomenon of wilful blindness, exploring the reasons that individuals and groups are blind to impending personal tragedies, corporate collapses, engineering failures – even crimes against humanity. We turn a blind eye in order to feel safe, to avoid conflict, to reduce anxiety and to protect prestige. It makes us feel good at first, with consequences we don't see. But greater understanding leads to solutions, and

Heffernan shows how – by challenging our biases, encouraging debate, discouraging conformity, and not backing away from difficult or complicated problems – we can be more mindful of what's going on around us and be proactive instead of reactive.

**Loose-Leaf Version for Psychology, Canadian Edition** Aug 29 2022

Testosterone Sep 05 2020 \*\*\* RECOMMENDED AS ONE OF THE TIMES' BEST SCIENCE BOOKS OF 2021 'With all the talk about testosterone in sex, sports and politics, we need a good explanation of the science and its implications, and this one is outstanding.' STEVEN PINKER, bestselling author of *The Blank Slate* 'There are whole books written about the idea that behavioural sex differences are a societal construct and how a male hormone we know influences animal behaviour somehow doesn't influence us. Hooven's book is a riposte to that silliness - and also a defence of a hormone that isn't just about aggression.' TOM WHIPPLE, THE TIMES, BEST SCIENCE BOOKS OF 2021 'Fascinating, vital, unputdownable.' JULIE BINDEL 'The definitive book on testosterone . . . A brave and significant book . . . simply fascinating and filled with extraordinary facts.' EVENING STANDARD 'Testosterone does what all superb popular science must do: it entertains as it educates.' THE WALL STREET JOURNAL Through riveting personal stories and the latest research, Harvard evolutionary biologist Carole Hooven shows how testosterone drives the behaviour of the sexes apart and how understanding the science behind this hormone is empowering for all. The biological source of masculinity has inspired fascination, investigation and controversy since antiquity. From the eunuchs in the royal courts of ancient China to the booming market for 'elixirs' of youth in

nineteenth-century Europe, humans have been obsessed with identifying and manipulating what we now know as testosterone. And the trend shows no signs of slowing down. Thanks to this history and the methods of modern science, today we have a rich body of research about testosterone's effects in both men and women. The science is clear: testosterone is a major, invisible player in our relationships, sex lives, athletic abilities, childhood play, gender transitions, parenting roles, violent crime, and so much more. But there is still a lot of pushback to the idea that it does, in fact, contribute to sex differences and significantly influence behaviour. Hooven argues that acknowledging testosterone as a potent force in society doesn't reinforce stifling gender norms or patriarchal values. Testosterone and evolution work together to produce a huge variety of human behaviour, and that includes a multitude of ways to be masculine and feminine. Understanding the science sheds light on how we work and relate to one another, how we express anger and love, and how we fight bias and problematic behaviour to build a fairer society.

*Handbook of Social Psychology, Volume 1* Sep 29 2022 First published in 1935, The Handbook of Social Psychology was the first major reference work to cover the field of social psychology. The field has since evolved and expanded tremendously, and in each subsequent edition, The Handbook of Social Psychology is still the foremost reference that academics, researchers, and graduate students in psychology turn to for the most current, well-researched, and thorough information covering the field of social psychology. This volume of the Fifth Edition covers the science of social psychology and the social being.

**Stumbling on Happiness** Jan 02 2023 In this fascinating and often hilarious work – winner of the Royal Society of Science

Prize 2007 – pre-eminent psychologist Daniel Gilbert shows how – and why – the majority of us have no idea how to make ourselves happy.

**Redirect** Jan 10 2021 A problem shared is a problem halved? Not necessarily... Talking about our problems isn't always a good idea. World-renowned psychologist Timothy Wilson reveals how this, and many other conventional therapies and interventions, can often do us more harm than good. Presenting the very latest research, Wilson argues that the key to transforming our lives lies simply in learning to redirect the stories we tell ourselves. His revolutionary approach reveals how reshaping our internal narratives can increase our personal well-being and transform our understanding of human behaviour - our narratives can change surprisingly quickly if tweaked in the right way. How can we best recover from trauma? Why might some sex education result in more teen pregnancies? Why will most self-help books leave you worse off? **Redirect** proposes a radical new view of the world. It also offers a range of practical advice - that has, crucially, been tested scientifically and found to have real results - that can show us the way to social progress.
