In order to ensure environmentally responsible production and disposal of products, local governments are imposing stricter environmental regulations, some of which even require manufacturers to take back their products at the end of the product's useful life. These government regulations, together with increasing environmental awareness, have forced manufacturers to invest in environment-conscious manufacturing. The multiple Criteria Decision Making Techniques presented in this book can be employed to solve the problems of environment-conscious manufacturers in product design, logistics, disassembly and remanufacturing. America's heartland - often overlooked in studies focusing on other regions, or particular cities or industries - has a distinctive labor history characterized by the sustained, simultaneous growth of both agriculture and industry. Since the transfer of labor from farm to factory did not occur in the Midwest until after World War II, industrialists recruited workers elsewhere, especially from Europe and the American South. The region's relatively underdeveloped service sector - shaped by the presumption that goods were more desirable than service - ultimately led to agonizing problems of adjustment as agriculture and industry evolved in the late twentieth century.
