Professional Collaboration with Purpose Aug 17 2021 Building on both cutting-edge research and professional learning practice, Amanda Datnow and Vicki Park explore how professional collaboration can support deeper learning for students and teachers alike. While many schools and systems support teacher collaboration, they often fall short of their intended goals of improving teaching and learning. This book provides concrete guidance for creating the conditions for collaboration in which teachers are moved toward—rather than repelled—by joint work. The authors explore how collaborative settings can provide a space for working through the inevitable challenges that accompany the changing nature of teaching in the age of accountability and show the motivation, inspiration, and energy that teachers personally--and collectively--gain from collaborating to improve student learning. Ultimately, they show how teacher empowerment towards working together builds equitable and excellent learning environments.

The Art of Asking Jan 10 2021 Rock star, crowdfunding pioneer, and TED speaker Amanda Palmer knows all about asking. Performing as a living statue in a wedding dress, she wordlessly asked thousands of passersby for their dollars. When she became a singer, songwriter, and musician, she was not afraid to ask her audience to support her as she surfed the crowd (and slept on their couches while touring). And when she left her record label to strike out on her own, she asked her fans to support her in making an album, leading to the world's most successful music Kickstarter. Even while Amanda is both celebrated and attacked for her fearlessness in asking for help, she finds that

there are important things she cannot ask for—as a musician, as a friend, and as a wife. She learns that she isn't alone in this, that so many people are afraid to ask for help, and it paralyzes their lives and relationships. In this groundbreaking book, she explores these barriers in her own life and in the lives of those around her, and discovers the emotional, philosophical, and practical aspects of *The Art of Asking*. Part manifesto, part revelation, this is the story of an artist struggling with the new rules of exchange in the twenty-first century, both on and off the Internet. *The Art of Asking* will inspire readers to rethink their own ideas about asking, giving, art, and love.

Feature Engineering for Machine Learning Jul 16 2021 Feature engineering is a crucial step in the machine-learning pipeline, yet this topic is rarely examined on its own. With this practical book, you'll learn techniques for extracting and transforming features—the numeric representations of raw data—into formats for machine-learning models. Each chapter guides you through a single data problem, such as how to represent text or image data. Together, these examples illustrate the main principles of feature engineering. Rather than simply teach these principles, authors Alice Zheng and Amanda Casari focus on practical application with exercises throughout the book. The closing chapter brings everything together by tackling a real-world, structured dataset with several feature-engineering techniques. Python packages including numpy, Pandas, Scikit-learn, and Matplotlib are used in code examples. You'll examine:

- Feature engineering for numeric data: filtering, binning, scaling, log transforms, and power transforms
- Natural text techniques: bag-of-words, n-grams, and phrase detection
- Frequency-based filtering and feature scaling for eliminating uninformative features
- Encoding techniques of categorical variables, including feature hashing and bin-counting
- Model-based feature engineering with principal component analysis
- The concept of model stacking, using k-means as a featurization technique
- Image feature extraction with manual and deep-learning techniques

Somewhere Over the Rainbow Dec 29 2019 Amanda is a free spirit who somehow manages to get herself stuck in the energy vibration of a physical body. Of course she did it on purpose; nothing happens by accident. She's a little embarrassed to find herself on earth again and

wonders how she ended up here when she vowed she'd never reincarnate again. Her most down-to-earth task is to see through the misty illusions of things for herself and to remember her spiritual nature. In the course of events, she gets sidetracked by what everyone says is real life. But she's not sure what's real anymore. She's been dreaming about rainbows lately, and now she's beginning to wonder if her life is really a dream she's having. Lavender is trying to remember something she's forgotten about her spiritual nature so she registers for school in the universe and begins classes in Time and Space, Energy and Matter, and Reality Awareness. She's a little concerned about the whole idea of synchronicity and the simultaneous time-space concept; she's not sure if she can handle everything at once. Her destiny is to unearth the mysteries of the universe and to rediscover the Scroll of Knowledge she wrote in Egypt. But she's reluctant to remember her experiences as a philosopher and has turned off her spiritual awareness. Rainbow is Amanda's higher self and Lavender's teacher who tries to help them see the light within themselves. But Rainbow is really more than she appears to be at first, or even second, glance.

Professional Identity Development through Incidental Learning Dec 21 2021 Since the early 1990s there has been a persistent drive towards professionalising the education sector, with a particular focus on those responsible for teaching the post-fourteen age group. This shift towards recognition of the sector in terms of the professionals who teach within it has led to constant, repetitive revision of teaching standards, the regulation and subsequent de-regulation of the teaching qualifications and the introduction of professional bodies. This book aims to explore the way that professional identity develops for trainee teachers, in the FE and Skills sector, with a particular emphasis on the role that incidental learning has in this development. The author argues for a more holistic approach to the development of professionalism through these informal learning experiences, as opposed to a criteria based approach.

Teacher Evaluation in Second Language Education Sep 17 2021

Effective language learning depends on effective instruction. In order to investigate whether or not this is taking place, teachers' classroom pedagogical practices, both in-service and pre-service, are frequently monitored by means of observation and feedback. However, research indicates that although this process has potential value for teacher learning and development, there are also a number of attendant problems and it is therefore important that practitioners share their experience with others in the field in order to expand the existing knowledge base. This volume investigates participant experiences, looking beyond the materials used and examining the way in which language teachers are evaluated and supported throughout their careers. Particular attention is given to the practices and frameworks involved, outlining key approaches and discussing tools for investigation and collaboration. The book highlights the importance of the use of talk to foster reflection and teacher learning, the value of learning from experienced others and the importance of giving voice to all those involved in the process of development and evaluation.

Transform Your 6-12 Math Class Sep 05 2020 Through detailed lessons and examples, discover how to integrate technology in K-5 math to amplify and enhance your mathematics teaching and drive student learning. Instead of drill-and-practice apps and worksheets, what if technology enabled exploration of math concepts? Instead of screens for disconnected individual learning, what if technology fostered mathematical discourse and collaboration? Instead of a one-size-fits-all approach to teaching mathematics, what if we used technology to differentiate to meet students' diverse needs? Technology has the power and potential to support the teaching and learning of math content at all grade levels, but the presence of technology is insufficient unless it's paired with effective teaching practices and meaningful content. This book poses and unpacks the above questions and many more, with examples that illustrate how to integrate technology in the K-5 math classroom, highlighting opportunities to transform mathematics teaching through strategic technology use. The book:

- Illustrates two contrasting examples in each chapter, including transcripts of sample class conversations, mathematical tasks, illustrations of student work and reflection and discussion prompts.
- Features discussion of research-based ideas relating to the contrasts presented in the chapters, encouraging readers to connect what they learn from the specific cases with the research on these topics.
- Covers a variety of mathematics content areas such as functions and algebraic thinking, geometry and measurement, and data and statistics.
- Provides strategies for implementing the concepts in class, with ideas and examples of tools based not on how they look but what they can do in your mathematics teaching.

Today's technology offers more possibilities than ever for supporting students in mathematics. This book draws upon the latest

research in technology and math education, while providing tools to incorporate effective strategies into curriculum right away.

It brings together supportive materials to encourage teachers to reflect on their present practice, take sensible risks with their teaching, and understand the importance of enjoyment and engagement for both teachers and pupils. At a time when test and examination results still dominate the educational landscape, there is a need to focus on, and support teachers with, the real meaning and purpose of learning. In the Zone concerns itself with important aspects of learning that are not always prominent in government policy and legislation. In particular, it argues that challenge is an essential element of true learning, without which there can be no progress. It brings together supportive materials aimed at encouraging teachers to reflect on their present practice, take sensible risks with their teaching, and understand the importance of enjoyment and engagement for both teachers and pupils. Importantly, the book is fully up to date with the new Ofsted Education Inspection Framework and current thinking around positive pupil mental health. "In the Zone is a concise and accessible book focused on children ' s learning and how, as a teacher, we can maximise this, both at school and beyond...It is hard to strike the right balance and the author helps with this by offering questions or

tasks at the end of each chapter providing structured reflection and prompts to relate the content to personal practice and experience. Furthermore the author ' s use of a wide range of research, opinions and visual aids alongside real life examples was thought provoking. Therefore the book is ideal as a point of reference if you want to try something new or want to be reminded of personal key motivators for becoming a teacher." Mind the Gap Jun 14 2021 Higher education needs a new, holistic assessment of global learning. The studies in this edited volume investigate not just student learning, but also faculty experiences, program structures, and pathways that impact global learning. Showcasing recent, multi-institutional research related to global learning, this book expands the context of global learning to show its antecedents and impacts as a part of the larger higher education experience. Chapters look at recent developments such as short-term, off-campus, international study and certificate/medallion programs, as well as blended learning environments and undergraduate research, all in the context of multi-institutional comparisons. Global learning is also situated in a larger university context. Thus, there is a growing need for bridging across disciplinary and administrative silos, silos that are culturally bound within academia. The gaps between these silos matter as students seek to integrate off- and on-campus learning, and it is up to the academy to mind those gaps.
